1 Choices

- Datamaps: For the first visualization, I have chosen a datamap which visualizes the level of wellbeing and life expectancy.
- Barchart: For the second visualization, I have chosen a bar chart which visualizes the following information per country: amount of dwellings without basic faculties, employment rate, educational attainment, years in education and air pollution. Each of these elements has a different unit by which the value is represented. Therefore one has to hover over a bar to see the corresponding unit.
- Communication: The visualisations communicate by clicking on the countries. When one clicks on a country, the corresponding barchart appears.
- Overall website design: I have used bootstrap to create an overall website design. The title and subtitles are on top of the page. The datamap and the barchart are in the middle, where the datamap had 2/3rd of the page and the barchart 1/3rd. The story behind the data is on the bottom of the page.
